

Dashboard ► Full Stack Web Development 4.0 ► PHP v4.0 ► Day 4 | Classwork ► Day 4 | Challenge Part 4

Day 4 | Challenge Part 4

Today you will finish your car rental Web app. Your application should have basic functions:

- Customer registration
- Customer login
- Car booking option for logged in customers
- Add new car
- Edit car
- Delete car

If your app has these basic functions, then you can think about extended functions for the app admin, like:

- Cancel the car booking
- Customer profile page (all details about customer + details about all car rentals)
- See booked cars
- See free cars
- See most popular cars
- See most popular customers etc.

Note: Presentation of your projects and achievements during this week will start at 15:00 today.
